

Hi! I’m Asya Nelavitkaya.

A creative coder from Russia

INTRO

For more than 10 years I’ve been working as an teacher and interpreter. I was doing literary and technical translations and teaching English to kids and adults. First in my hometown Perm, then in Moscow and last couple years in Shanghai. I was having a great time in my comfort zone untill I met JavaScript. Since then I quit my job and left my shell.

SKILLS

About a year ago I made my first webpage. Couple weeks were enough to feel comfortable with HTML and CSS. The next two months I read **HTML5** and **CSS3** documentation, completed ‘[Responsive Web Design](#)’ course on FreeCodeCamp and [HTMLacademy](#) course. I read an enormous number of articles, watched numerous video-tutorials, visited several events and workshops organised by [CoderBunker](#) and [CodeBar](#).

I began learning **JavaScript** with ‘Intro to JS: Drawing & Animation’ course on [KhanAcademy](#). I’ve learned to make animated UX / UI elements. I’ve finished FreeCodeCamp course ‘[JavaScript Algorithms and Data Structures](#)’. After couple months of practice writing vanilla JS code I’ve strated using **JQuery** library.

I’ve started working with Terminal and a distributed version-control **Git** system.

I learned to make adaptive and cross-browser web design, switched from Sublume to Visual Studio Code.

In couple days I learned to use **Bootstrap** framework. Wow.js and Animate.css libraries helped me apply animation to the elements of the page.

Using preprocessors **LESS** and **SASS**, as well as **BEM** methodology made my coding process way easier and faster.

I’ve been always interested in design. I have an experience using **Adobe Photoshop, Illustrator, LightRoom, Xd, Figma**.

This year I’ve enrolled in the Design specialty at an online university.
